What the colour of an emoji means

The House of Wellness TV show is back for 2023! This week, the team looks at heart health, the healing power of tattoos, float therapy and more. Watch the full episode.

The House of Wellness – Season 7, Episode 1

This week on The House of Wellness, we're looking at all things [heart](#), from the best [exercises](#) to keep your ticker strong to [broken heart syndrome](#) and the meanings behind different coloured heart emojis.

Also this week:

- Meet the scientists are working towards breeding environmentally friendly cows.
- Jo Stanley uncovers the power and [impact of tattoos](#) with some of Australia's most skilled tattooists.
- Discover ways to [relax the mind](#) and body through float therapy with personal trainer Luke Hines.

Strategies to lower emissions intensity and gross emissions in ruminants

- Managing herd life and replacements bred
- Nutrition (e.g. lipids, concentrates) and inhibitors (e.g. 3-NOP)
- Vaccines and early life programming
- Feed efficiency
- Fertiliser optimisation
- On-farm energy savings
- Selecting for low CH₄ production directly
- Breeding for higher producing cows (reducing emissions per kg product)

The Sustainability Index is the first step!

The page shows introductory information about the Feed and gas Working Group

Introduction

In June 2015, at the ICAR Technical Meeting held in Krakow, the Board endorsed the Feed and gas Working Group whose Terms of Reference are available [here](#)

The Chairperson of the WG is [Birgit Gredler-Grandl](#)

Members of the Working Group

- Christine Baes
- Lorenzo Benzon
- Raffaella Finocchiaro
- Maria Frizzarin
- Phil Garnsworthy
- Nina Krattenmacher
- Jan Lassen
- Jennie Pryce

Brian Wickham Young Persons Exchange Program Bursary

- Caelli Richardson

Industry liaison group

- Michelle Axford
- Andrew Cromie
- Juan Pena
- Sijne Van Beek
- Marco Winters

Feed efficiency

Research Farm Dairy Campus, NL

- Recording of individual feed intake in research and commercial farms
- RIC feed bins
- Several thousand cows in reference population for genomic evaluation for dry matter intake
- Cooperation between WUR and CRV

Measuring Methane emission

■ Climate Smart Cattle Breeding

- Goal is to have breeding values available for selection
- Recording methane on 100 farms with methane sensors (sniffers)
- ~ 15,000 phenotyped by end of 2023
- Large-scale and long-term (2+ years) automated recording of CH

Selection Decisions

Human activity contributing to global warming

- Meat and milk from ruminants provides important protein and nutrients for human consumption
- Human activity net temp increases of 1.1°C
- Livestock account for 6% of GHG
 - 1 cow emits ~100 kg methane/year
 - 3.5 billion ruminants worldwide

Review: Fifty years of research on rumen methanogenesis: lessons learned and future challenges for mitigation

Caeli Richardson (2022)

Genetics to reduce ruminant emissions

Key points

- Sustainability index – reduces emissions intensity
- Mooving towards a future sustainability index with real “methane” data
- Data from Aussie farms imperative
- International effort and collaboration

“Anything that helps the environment is moosic to my ears!”

Ginfo farmers

"Ginfo is a great tool for the entire dairy industry by providing the latest genetic information and adding to genetic reliability. At an individual farm level, Ginfo means you have genetic accuracy because of genomic testing, and the ability to make informed selection decisions because of the access to early genomics on young heifers. There are a lot of really good farmers are involved in the Ginfo project so it also gives participants access a great network of progressive farmers."

– Sam McCluggage Allansford, Victoria, milking 700 Holsteins.

"My herd is now a better, stronger and a lot more consistent herd today than it would have been were it not for the Ginfo project and the sum of these gains across all herds strengthens our whole industry.... Contributing my data to help validate the science and technology was not any inconvenience as we were already had good systems of recordkeeping of herd events and were herd testing monthly. Ginfo is about speeding up herd improvement and this has been a win-win; I would thoroughly recommend it."

– Ruth McGregor, Busselton, WA, milking 320 Holsteins.

"Ginfo has benefits for the broader dairy industry as well as the individual farm so I can't understand why more people aren't involved. The more information you have, the better armed you are to make the right decisions. Ginfo helps us identify which heifers to keep and rear and which ones to sell and then join the best cows to better bulls."

– Bev Carpenter, South Riana, milking more than 900 Holsteins across two herds.

"Anthea and I believe in the importance of an Australian Herd Improvement Industry and that genetic growth creates profit, so it is easy to be involved with something as important as Ginfo. One of the big advantages for us comes in the form of subsidized genome testing of our young stock. We genome test all our calves and use this information to help build our business strategy."

– Trevor Saunders and Anthea Day, Shady Creek, Gippsland, milking 750 predominantly Jersey.

Driving down emissions with genetics

- Current emissions intensity 12.7 kg CO₂-eq/kg protein-eq
- By 2050:
 - Reduce gross emissions by 8-10%
 - Reduce emissions intensity by >20% (2.7 kg reduction of CO₂-eq/kg protein)
- R&D required for 30-50 year targets
