## Accelerating heifer genomics

Faster results

Collaboration

Coms & extension

Average days between genotype loading and result delivery

# Why don't animals receive results?

- 4% animals had an unresolved sire issue
- 2% animals had an unresolved dam issue
- 1% had an unknown breed

## Dairy Australia animal husbandry genetics survey

Do not genomically test heifer calves and unlikely to do so

2022 survey with 400 randomly selected participants

Aware genomics or genomic testing

Currently genomically test heifer calves

17%

Not currently using genomically testing but have in the past

7%

Plan to genomically test heifer calves in the next 12 months

63%

## **Extension activities**

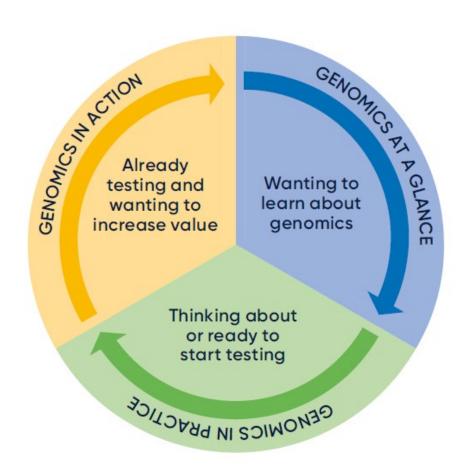

## **Extension activities**

- 97% likely to take action (target >8)
- 9/10 would recommend to others
- 'We are seriously thinking about doing testing on our heifers'
- 'I will be genomic testing my heifers as soon as possible to get the full advantage of it.'

Pre-weaning mortality

### Genetic trend for Stillbirth Direct 2.5% improvement in 20 years

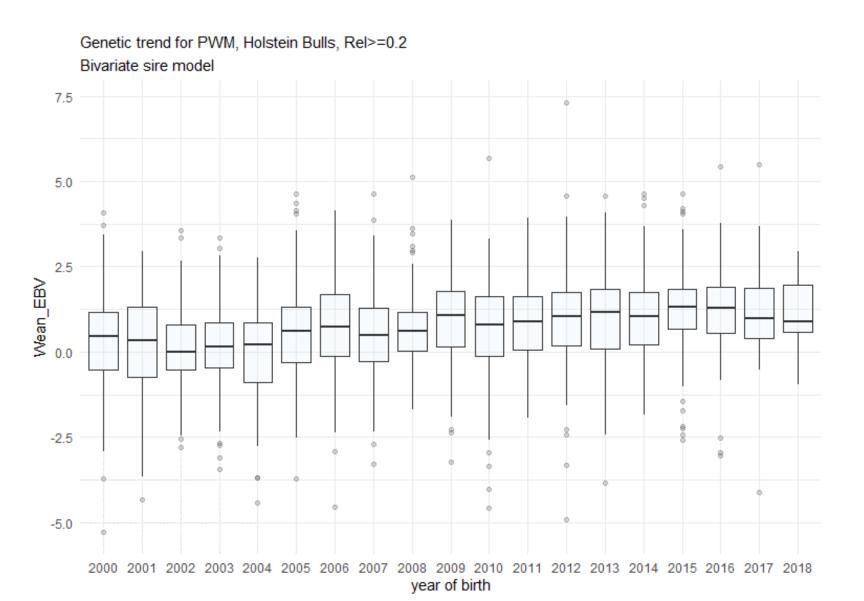

## Genetic trend for Stillbirth Maternal ~3% improvement in 20 years

### Genetic trend for Pre-weaning mortality ~0% improvement in 20 years

### **Bottom line**

- There is genetic variation in calf health traits so we can breed for improved
  - Stillbirth direct
  - Stillbirth maternal
  - Pre-weaning mortality
- Validation, using gold standard Australian calf data, is the next step
